To Whom it May Concern:

It is my pleasure to recommend Benjamin Curtiss as a TA for Biology 102. I have been his doctoral supervisor at the Coastal University of Seaborg for two years now. His work for me has included data analysis, computational modeling and sample collection. Benjamin is one of the best students in his cohort in terms of work ethic and technical skill.

Benjamin always documents his work thoroughly, demonstrating an ability to break down a problem step-by-step. As a researcher, he has a deep understanding of the material that will be covered in this course. He is able to communicate about scientific topics effectively and has never caused any major issues while working with others in my lab. As you can see on his transcript, Benjamin passed all of his biology courses with very high marks, making him extremely qualified to grade and tutor this course.

On a personal level, Benjamin is a very serious worker. He consistently applies extra effort to get work done as quickly as possible. He is not just willing, but eager to take on extra tasks to help out his superiors. I have found Benjamin to be easy to work with.

Based on his work for me over the last two years, I would highly recommend Benjamin Curtiss. I believe wholeheartedly that he would be a good TA for this course.

If I can be of any further assistance, or provide you with any further information, please do not hesitate to contact me.

Yours sincerely,

Dr. Blake Howard
